SUMMARY

Results-driven Software Engineer with 3 years of experience building real-time communication systems using Socket.io, implementing JWT-based authentication, and optimizing application performance through efficient database queries and multi-layer caching (Redis, in-memory, browser-level). Skilled in building REST APIs, integrating payment gateways (Stripe, FastPay), and applying frontend optimization techniques including React.memo, lazy loading, code splitting, and state management with Redux Toolkit & Context API. Experienced in deploying scalable applications on Vercel, Netlify, and Render with CI/CD best practices.

EXPERIENCE

Software Engineer **Lahore, Pakistan**

WeiBlocks *2025 – 2026*

- Solved complex technical challenges involving Ethereum and Solana blockchain backend integration with Node.js and Express.js, optimizing MongoDB database payloads for structured, efficient storage and reducing data redundancy by 35%.
- Enhanced API responsiveness by up to 40% by refactoring Express.js endpoints to consolidate multiple token-specific calls into a single optimized request, significantly improving frontend performance and reducing server load.
- Architected seamless integration between React.js frontend and Node.js backend systems using REST APIs and WebSockets, enabling accurate, real-time data synchronization across multiple user interfaces.
- Implemented scalable file upload and media storage solutions with Node.js and Cloudinary, featuring automatic resizing, compression, and MongoDB linking, reducing media load times by 45%.
- Built a real-time notification system using Node.js, WebSocket (Socket.io), and polling mechanisms, delivering instant booking status updates to users with sub-second latency.
- Collaborated with cross-functional teams in an Agile/Scrum environment, participating in code reviews, sprint planning, and maintaining clean, modular, scalable codebases with Git version control and CI/CD practices.

Software Engineer *Pakistan — Remote*

The Infini Studio *2024 – 2025*

- Improved application performance by optimizing API calls and React component rendering, delivering a faster and smoother user experience.
- Strengthened application security by implementing JWT-based authentication and role-based access control (RBAC) to protect sensitive resources.
- Reduced development effort by building reusable React components and modular backend services, improving code maintainability and scalability.
- Optimized Docker images by reducing image size from 1.2GB to 120MB and improving build efficiency, enabling faster and more consistent deployments on AWS EC2.
- Streamlined deployment and release processes by configuring automated CI/CD workflows for AWS EC2, minimizing downtime and reducing manual deployment errors.

PROJECTS

Prescripto | React.js, Node.js, Redux Toolkit, Stripe, MongoDB, JWT, Nodemailer, Cloudinary, REST APIs

- Developed a full-stack doctor appointment booking platform with JWT-based secure authentication, supporting seamless patient-doctor interactions.
- Implemented interactive scheduling components for slot, time, and date selection with integrated Stripe payment gateway for appointment booking.
- Built role-based doctor and admin dashboards to efficiently manage 100+ appointments, slot availability, and user records.

Quick.Ai | React.js, Node.js, MongoDB, OpenAI API, Clerk, Redis, Stripe, Shadcn UI, Context API

- Built a full-stack SaaS platform with 5+ AI-powered tools using React.js, Node.js, MongoDB, Clerk, Redis, and OpenAI API.
- Implemented secure authentication, subscription management, and Stripe payment integration for premium features.
- Developed a responsive dashboard with Socket.IO-powered real-time updates for seamless AI tool interactions.
- Improved frontend performance using React.memo, lazy loading, and code splitting to deliver a faster user experience.
- Integrated Redis caching to reduce API response time and optimize server load for high-traffic AI requests.
- Deployed and maintained the platform on Vercel with CI/CD pipelines for seamless updates and minimal downtime.

Multivendor | Next.js, Redux Toolkit, Node.js, MongoDB, JWT, Docker, AWS, Socket.io, GraphQL

- Built a scalable multi-vendor e-commerce platform using the MERN stack (React.js, Node.js, Express.js, MongoDB) with Redux Toolkit for efficient state management.
- Implemented role-based authentication and dedicated dashboards for clients, sellers, and administrators to manage products, orders, and vendor operations securely.
- Integrated Stripe for secure online payments and Socket.IO for real-time communication, enhancing the overall user experience.
- Designed a modular and scalable architecture with optimized REST APIs, reusable components, and dynamic product search and filtering for improved performance and maintainability.

SKILLS

Languages: JavaScript, TypeScript, C++, Python, SQL
Frontend: React.js, Next.js, Redux Toolkit, Context API, Hooks, Shadcn UI, Tailwind CSS, Bootstrap, HTML5, CSS3
Backend: Node.js, Express.js, RESTful APIs, GraphQL, WebSocket (Socket.io), Middleware Architecture
Databases: MongoDB, Mongoose, Redis, SQL, SQLite, PostgreSQL
Authentication & Security: JWT, Bcrypt, OAuth, Clerk, Role-Based Access Control (RBAC)
Performance & Optimization: React.memo, Lazy Loading, Code Splitting, Redis Caching, In-Memory Caching, Query Optimization
System Design: Scalability, Microservices, Caching Strategies, Rate Limiting, Database Indexing
Tools: Docker, AWS, Git, GitHub, CI/CD, VS Code, Postman, Vercel, Netlify, Render, Stripe, Cloudinary, ImageKit, OpenAI API

CERTIFICATIONS

- Certified Software Engineer – DevWeekends.

EXTRACURRICULAR

- 2nd Place – Quiz Competition, University of South Asia, Software Engineering Department (Fall 2025).
- 1st Place – University Project Display (4th Semester).

EDUCATION

University of South Asia **Lahore, Pakistan**
BS Software Engineering
